

# TC100

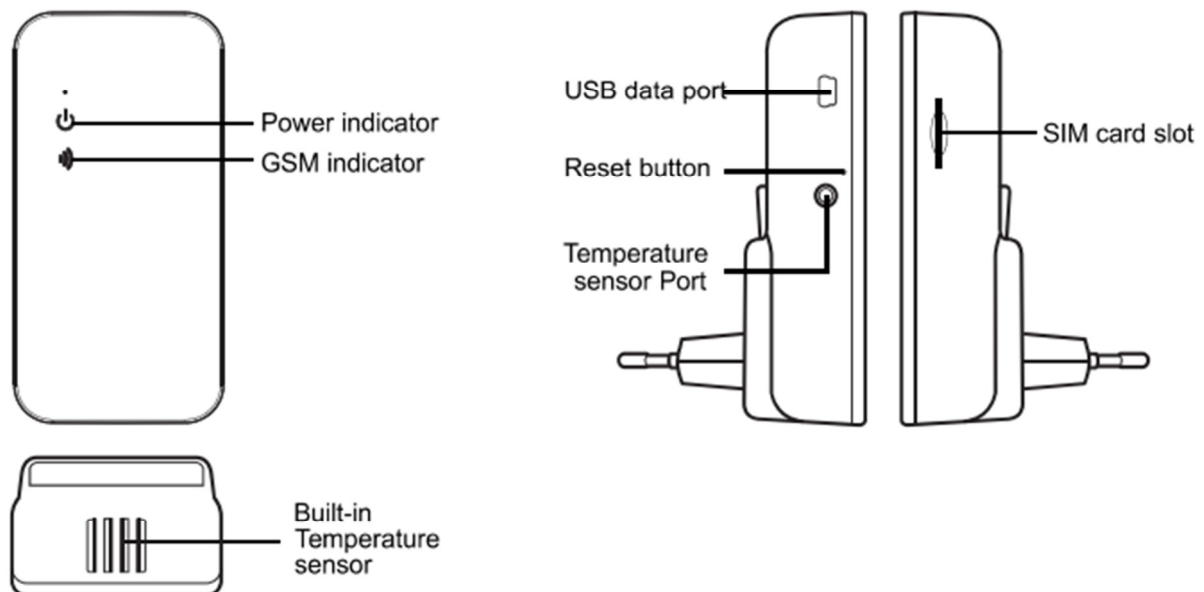

Setup is easy as sending the TC100 a SMS

You are now in control to receive Temperature excursion and Power Failure Alerts

The TC100 is a plug-in unit that monitors **Power Failures & Temperature Excursions**. It uses a standard SIM card to send text message alerts over the GSM (mobile) network to multiple recipients.

Temperature thresholds are user-programmable and text message alerts can be sent to 5 recipients. The unit is powered when plugged into a 220Vac socket and it has 2 Temperature sensors. An internal sensor to monitor Room Temperature and an external probe to measure Fridge or Cabinet temperature.
